# **S** SASERADEVICE for USB

SaseraDevice

SaseraDevice enhances your overall endpoint security strategy.

For companies of every industry with high demands regarding endpoint security to protect your data on your removable USB-Sticks from loss or theft.

SaseraDevice is a transparent encryption solution for USB and FireWire devices as well as CDs / DVDs. SaseraDevice has been developed for companies using external (USB hard drive, USB stick, etc.) to enforce a corporate governance security policy. This ensures that the encrypted Data can be read and edited also on external computers, without any software installation. The same goes for the encrypted sending of CDs/DVDs, only that the password for opening the data carrier must be sent to the destination, e.g. by phone or SMS.

Furthermore, a container encryption is included, which help the user to store data encrypted like a vault on a desktop or in a Cloud.

.

Functionality Overview:
- Automatic and transparent Encryption of all USB and FireWire-Devices
- Encryption of CDs / DVDs
- Encrypted vault (container for storage on PC or in the Cloud)
- Use the encrypted devices on external computers, without additional Software installation
- Central administration via Microsoft Group policies
- Central setting of encryption-Guidelines (Enforcement for encryption)
